Differential Equations And  
Linear Algebra 3rd Edition

Solution Manual Edwards  
Separation of the variable is done when the differential equation can be written in the form of  $dy/dx = f(y)g(x)$  where  $f$  is the function of  $y$  only and  $g$  is the function of  $x$  only. Taking an initial condition, rewrite this problem as  $1/f(y)dy = g(x)dx$  and then integrate on both sides. Also, check: Solve Separable Differential Equations Integrating factor

**AND THEIR APPLICATIONS AHSAN ...**

Sometimes there is no analytical solution to a first-order differential equation and a numerical solution must be sought. The first-order differential equation  $dy/dx = f(x,y)$  with initial condition  $y(x_0) = y_0$  provides the slope  $f(x_0,y_0)$  of the tangent line to the solution curve  $y = y(x)$  at the point
