It can take less than 10 seconds for a person to lose consciousness as a result of strangulation, and death can occur in just under five minutes. According to the Training Institute on Strangulation Prevention, nearly four in five victims of strangulation are strangled manually (with hands).

Strangulation Can Leave Long-Lasting Injuries

Strangulation is a form of asphyxia produced by a constant application of pressure to the neck. The three forms of strangulation are: hanging, ligature, and manual. Hanging occurs when a person is suspended with a ligature around his or her neck, which constricts due to the gravitational pull of the person's own body weight.

Non-Fatal Strangulation Documentation Toolkit

Manual strangulation is the process of using one's hands or forearm to strangle the victim and may be the most common form of strangulation employed in the context of intimate partner violence. In contrast, ligature strangulation refers to the use of a rope, scarf, belt, or other similar object to strangle the victim (Volochninsky, 2012).

Put ice or a cold pack on the area for 10 to 20 minutes at a time. Put a thin cloth between the ice and your skin. Ask your doctor if you can take an over-the-counter pain medicine, such as acetaminophen (Tylenol), ibuprofen (Advil, Motrin), or naproxen (Aleve). Be safe with medicines.

Strangulation Injury: Care Instructions

Frequently, strangulation does not result in visible physical findings. 3 The lack of obvious injury, along with the distraught mental state of these patients, often results in underevaluation. It is important to perform a thorough exam, as findings may be subtle and located in difficult to see areas such as the scalp, behind the ears, and inside the mouth.
