Gestural language and vocal language depend on similar neural systems. The regions on the cortex that are responsible for mouth and hand movements border each other. Nonhuman primates can use gestures or symbols for at least primitive communication, and some of their gestures resemble those of humans, such as the "begging posture", with the hands stretched out, which humans share with chimpanzees.

There could have been a gradual evolution of a capacity for grammar, although language remained primarily gestural until relatively late in our evolutionary history. The shift from visual gestures to vocal ones would have been gradual, and largely autonomous speech likely arose following a genetic mutation between 100,000 and 50,000 years ago.
